DEPARTMENT OF ANAESTHETICS

Physiology and Pharmacology for Anaesthetists

Monday 13th March to Thursday 23rd March 1989

A basic science course of lectures and tutorials for candidates preparing for Part II FFARCS, including VIVA and MCQ practice.

Lectures will include relevant advances in physiology and pharmacology, statistics, clinical trials and pharmacokinetics. Tutorials will be held in small groups on selected topics. Candidates will be evaluated before and after the course by MCQ tests, and VIVA practice will be given to all course participants covering a wide range of topics in basic sciences.

Pharmacokinetics with worked examples will be organised by Professor W. S. Nimmo

Course Organisers: Dr. A. Holdcroft
Professor J. G. Whitwam

Course fee £385 (including refreshments)

Further details from:
Wolfson Conference Centre
Royal Postgraduate Medical School
Hammersmith Hospital, Du Cane Road, London
Telephone: 01-740 3117

STATISTICS AT SQUARE ONE

Eighth edition
T D V SWINSCOW

The statistical testing of data is indispensable in many types of medical investigations and a help on countless occasions in clinical practice. This book provides step by step instruction. Subjects covered include standard deviation, $\chi^2$ tests, t tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation not published in the original BMJ series. Methods specially adapted to pocket calculators.

Price: Inland £3.00; Abroad £4.50;
USA $8.00
BMA members: Inland £2.50;
Abroad £4.00; USA $7.00
including postage, by air abroad
Payment must be enclosed with order

Current Concepts in Critical Care

Series Editors: W. J. Kox, D. J. Bihari, London

W. J. Kox, J. E. Boulbbee, R. Donaldson, London (Eds.)

Imaging and Labelling Techniques in the Critically Ill

Hard cover DM 270,-. ISBN 3-540-17483-4

This book describes imaging and labelling techniques as a diagnostic tool in the critically ill in respect to the brain and the nervous system, the lungs, the cardiovascular system, and the abdomen.

Each section considers methods which can be used as a bedside procedure before going on to discuss more powerful diagnostic tools. The advantages and hazards of transporting patients to such equipment are evaluated and thereby offer the intensivist and the radiologist a rationale for carrying out these techniques in the critically ill.

A final section considers special methods applicable to all organ systems as well as procedures still in the research stage that may become clinical routine in the near future.
