Failed tracheal intubation at Caesarean section and the laryngeal mask, Ansermino, J. M., et al., (C) 118

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Patel, M., et al., (C) 635–636

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Robson, S. C., et al., 54–59

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Robson, S. C., (C) 636

“Needle-through-needle” technique for combined spinal-extradural anaesthesia in obstetrics, Familton, M. J., et al., (C) 327

Delayed presentation of an extradural abscess complicating thoracic extradural analgesia, Eldor, J., et al., (C) 634–635

Continuous extradural analgesia: comparison of midwife top-ups, continuous infusions and patient controlled administration, Purdie, J., et al., 580–584

Latest presentation of an extradural abscess complicating thoracic extradural analgesia, Sowter, M. C., et al., 103–105

Extradural diamorphine for postoperative analgesia: audit of a nurse-administered service to 800 patients in a district general hospital, Stuart-Taylor, M. E., et al., 420–432

Extradural haematomas after continuous extradural anaesthesia, Tekkok, I. H., et al., (C) 117

Extradural haematomas after continuous extradural anaesthesia, Wildsmith, J. A. W., (C) 116–117

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Patel, M., et al., (C) 635–636

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Robson, S. C., et al., 54–59

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Robson, S. C., (C) 636

“Needle-through-needle” technique for combined spinal-extradural anaesthesia in obstetrics, Familton, M. J., et al., (C) 327

“Neurological” complications of extradural bupivacaine, Jones, G., et al., (C) 328

“Neurological” complications of extradural bupivacaine, Wildsmith, J. A. W., (C) 327–328

Reflective blankets used for reduction of heat loss during regional anaesthesia, Hindsholm, K. B., et al., 531–533

Reversal of extradurally induced hypotension, Della Pupa, A., (C) 229–230

Reversal of extradurally induced hypotension, Sharrock, N. E., (C) 230

Rupture of membranes before the onset of spontaneous labour increases the likelihood of instrumental delivery, Kong, A. S., et al., 252–255

Severity hypertension during postpartum haemorrhage after i.v. administration of prostaglandin E2, Verheij, B., et al., (C) 623–624

Spinal anaesthesia for Caesarean section: 0.125% plain bupivacaine 12 ml compared with 0.5% plain bupivacaine 3 ml, Vucevic, M., et al., 590–595

The ideal spinal needle, Dorman, T., et al., (C) 227

Anaesthesia, paediatric, Anaesthesia and the ventilatory system in infants and young children, Hatton, D., et al., 398–410

Fresh gas requirements of an enclosed afferent reservoir breathing system during controlled ventilation in children, Meakin, G., et al., 43–47

Fresh gas requirements of an enclosed afferent reservoir breathing system in anaesthetized, spontaneously ventilating children, Meakin, G., et al., 333–337

Minimum alveolar concentration of sevoflurane in children, Kato, T., et al., 139–141

Anaesthesia Review 8, 8th Edn, Kaufman, L., (editor), (R) 231

Anaesthesia, safety, Reported significant observations during anaesthesia: a prospective analysis over an 18-month period, Chopra, V., et al., 13–17

Anaesthetic and Obstetric Management of High-Risk Pregnancy, 1st Edn, Datta, S., (editor), (R) 119

Anaesthetic techniques, endoscopy, Propofol sedation for outpatient upper gastrointestinal endoscopy, Borgnat, A., et al., (C) 632–635

Propofol sedation for outpatient upper gastrointestinal endoscopy, Patterson, K. W., et al., (C) 116

Anaesthetic techniques, extradural, Cardiovascular support during combined extradural and general anaesthesia, Wright, P. M. C., et al., 585–589

Combined spinal-extradural anaesthesia, Ferguson, D. J. M., (C) 450–451

Combined spinal-extradural anaesthesia in obstetrics, Eldor, J., (C) 634–635

Combined spinal-extradural anaesthesia: a comparison of midwife top-ups, continuous infusions and patient controlled administration, Purdie, J., et al., 580–584

Combined spinal-extradural anaesthesia, Eldor, J., (C) 634–635

Continuous extradural analgesia: comparison of midwife top-ups, continuous infusions and patient controlled administration, Purdie, J., et al., 580–584

Delayed presentation of an extradural abscess complicating thoracic extradural analgesia, Sowter, M. C., et al., 103–105

Extradural diamorphine for postoperative analgesia: audit of a nurse-administered service to 800 patients in a district general hospital, Stuart-Taylor, M. E., et al., 420–432

Extradural haematoma after continuous extradural anaesthesia, Tekkok, I. H., et al., (C) 117

Extradural haematomas after continuous extradural anaesthesia, Wildsmith, J. A. W., (C) 116–117

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Patel, M., et al., (C) 635–636

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Robson, S. C., et al., 54–59

Maternal and fetal haemodynamic effects of spinal and extradural anaesthesia for elective Caesarean section, Robson, S. C., (C) 636

“Needle-through-needle” technique for combined spinal-extradural anaesthesia in obstetrics, Familton, M. J., et al., (C) 327
Anaesthetics local, bupivacaine

- Continuous spinal analgesia during high-risk labour and operative delivery, CALLEJA, M. A., et al., (ARS) 443P
- Density of intrathecal agents, NICKOL, M. E., et al. 60-63
- Durability of 5% intrathecal bupivacaine and propofol for 0.5% hyperbaric bupivacaine for hip surgery, SPIERS, S. P. W., et al., (ARS) 443-444P
- Effect of low and high concentrations of alfentanil administered intrathecally on A\$ and C fibre mediated somatosensory reflexes, WANG, C., et al. 503-507
- Myocardial depressant effect of intrathecal bupivacaine and extradural anaesthesia for elective Caesarean section, PATEL, M., et al., (C) 635-636

- Prediction of the spread of repeated spinal anaesthesia with bupivacaine, TUOMINEN, M., et al., (C) 636-637
- Prediction of the spread of repeated spinal anaesthesia with bupivacaine, WILDHOLM, J. A. W., (C) 636
- Rapid administration of crystalloid preload does not decrease the incidence of hypotension after spinal anaesthesia for elective Caesarean section, RUTT, C. C., et al. 394-397
- Reflective blankets used for reduction of heat loss during induction of anaesthesia and laryngeal mask application, MARSH, E. J. et al. 100-102
- Effects of thiopentone and chlormethiazole on human myometrial arteries from term pregnant women, ALLEN, C. S. T., et al. 126-131
- The antioxidant potential of propofol (2,6-diisopropylphenol), MURPHY, J. A., et al. 519-522
- Propofol in acute intermittent porphyria, TIMMARSH, M. A., et al., (C) 636
- Propofol inhibits enzymatic degradation of alfentanil and sufentanil isolated from marmoset in vitro, JANICKI, P. K., et al. 311-312
- Propofol potentiates both pre- and postsynaptic effects of vecuronium in the rat hemidiaphragm, LIBEDA, M. D., et al. 282-285
- Propofol sedation for outpatient upper gastrointestinal endoscopy, BORGAT, A., et al., (C) 116
- Propofol sedation for outpatient upper gastrointestinal endoscopy, PATTERSON, K. W., et al., (C) 116
- Recovery from day-case anaesthesia: a comparison of total i.v. anaesthesia using propofol with an inhalation technique, NIGHTINGALE, J. J., et al. 356-359
- Sedation after cardiac bypass surgery: comparison of propofol and midazolam in the presence of a computerized closed loop arterial pressure controller, CHAUDHRI, S., et al. 98-99
- Sights and their effect on the breathing of patients anaesthetized with infusions of propofol, GOODMAN, N. W., et al. 48-53
- The antioxidant potential of propofol (2,6-diisopropylphenol), MURPHY, P. G., et al. 613-618
- Anaesthetics I.v., steroid, Preliminary study of a pregabalin emulsion (Kabi 2213) for i.v. induction of general anaesthesia, GRAY, H. C. J. et al. 272-276
- Anaesthetics I.v., thiopentone, Deametendedamine attenuates sympathoadrenal responses to tracheal intubation and reduces the need for thiopentone and peroperative fentanyl, SCHEININ, B., et al. 126-131
- Early tracheal intubation with thipentone in elective surgery, MARSH, J. E., et al. 100-102
- Effects of thiopentone and chlorpromazine on human myometrial arteries from term pregnant women, ALLEN, J., et al. 256-260
- Induction dose-response studies with propofol and thipentone, NAGUIB, M., et al. 308-310
- Anaesthetics local, bupivacaine, Analgesia for labour and delivery using incremental diamorphine and bupivacaine via a 32-gauge intrathecal catheter, KESTIN, I. G., et al. 244-247
- Continuous extradural anaesthesia: comparison of midwife top-up, continuous infusions and patient controlled extradural administration, PURDIE, J. et al. 580-584
- Duration of action of 5% intrathecal pethidine vs 0.5% hyperbaric bupivacaine for hip surgery, SPIERS, S. P. W., et al., (ARS) 443-444P
- Effect of addition of hyaluronidase to bupivacaine during extradural anaesthesia for elective Caesarean section, CARABINE, U. A., et al., (ARS) 228-229
- "Neurological" complications of extradural bupivacaine, JONES, G. et al., (C) 328
- "Neurological" complications of extradural bupivacaine, WILDHOLM, J. A. W., (C) 327-328
- Peak serum bupivacaine concentration, ATHERTON, A. M. J., (C) 540
Anaesthetics local, bupivacaine

- Effects of halothane and other volatile anaesthetics on protein synthesis and secretion in guinea pig liver slices, Ghantous, H. N., et al., (ARS) 172-177
- MAC-awake of isoflurane and halothane estimated by slow and fast alveolar washout, Gaumann, D. M., et al., 81-84
- Transcranial Doppler sonography: effects of halothane, enfurane and isoflurane on blood flow velocity in the middle cerebral artery, Thiel, A., et al., 388-393

Anaesthetics volatile, halothane

- Mac-awake of isoflurane and halothane estimated by slow and fast alveolar washout, Gaumann, D. M., et al., 81-84
- Transcranial Doppler sonography: effects of halothane, enfurane and isoflurane on blood flow velocity in the middle cerebral artery, Thiel, A., et al., 388-393

Anaesthesia, paediatric

- Evaluation of a disposable patient-controlled analgesia device in children, Irish, M., et al., 411-413
- Seizure-like movements during induction of anaesthesia in children, Kato, T., et al., 139-141

Anaesthetist, activity

- Emergency anaesthetic service at three hospitals. I: Methods and results, Baxter, M. K., et al., (ARS) 448P
- Emergency anaesthetic service at three hospitals. II. Obstetric anaesthetic services, Luthman, J. A., et al., (ARS) 448-449P

Anaesthetics, volatile

- Effects of volatile anaesthetic agents on protein synthesis and secretion in guinea pig liver slices, Ghantous, H. N., et al., 172-177
- MAC-awake of isoflurane and halothane estimated by slow and fast alveolar washout, Gaumann, D. M., et al., 81-84
- MAC-awake of isoflurane, enfurane and halothane evaluated by slow and fast alveolar washout, Gaumann, D. M., et al., 81-84
- MAC-awake of isoflurane, enfurane and halothane evaluated by slow and fast alveolar washout, Gaumann, D. M., et al., 81-84
- Transcranial Doppler sonography: effects of halothane, enfurane and isoflurane on blood flow velocity in the middle cerebral artery, Thiel, A., et al., 388-393

Anaesthetics volatile, isoflurane

- MAC-awake of isoflurane, enfurane and isoflurane on blood flow velocity in the middle cerebral artery, Thiel, A., et al., 388-393

Anaesthetics volatile, sevoflurane

- Minimum alveolar concentration of sevoflurane in children, Kato, T., et al., 139-141

Anaesthetist, risk

- First-time coronary artery bypass grafting: the anaesthetist as a risk factor, Merry, A. F., et al., 6-12

Analeptics, doxapram

- Effect of doxapram on neostigmine evoked antagonism of vecuronium neuromuscular block, Orlowski, M., et al., 418-419
- Effect of doxapram on the rate of recovery from atracurium and vecuronium neuromuscular block, Cooper, R., et al., 527-528

Analgesia, extradural

- Continuous extradural analgesia: comparison of midwife top-ups, continuous infusions and patient controlled administration, Purdie, J., et al., 580-584
- Gastric emptying during lumbar extradural analgesia in labour: effect of fentanyl supplementation, Wright, P. M. C., et al., 248-251

Analgesia, patient-controlled

- Continuous extradural analgesia: comparison of midwife top-ups, continuous infusions and patient controlled administration, Purdie, J., et al., 580-584
- Duration of action of 5% intrathecal pethidine vs 0.5% hyperbaric bupivacaine for hip surgery, Sferis, S. P. W., et al., (ARS) 443-444P
- Evaluation of a disposable patient-controlled analgesia device in children, Irish, M., et al., 411-413

Analgesic techniques, extradural

- Continuous extradural analgesia: comparison of midwife top-ups, continuous infusions and patient controlled administration, Purdie, J., et al., 580-584
- Duration of action of 5% intrathecal pethidine vs 0.5% hyperbaric bupivacaine for hip surgery, Sferis, S. P. W., et al., (ARS) 443-444P
- Evaluation of a disposable patient-controlled analgesia device in children, Irish, M., et al., 411-413

Analgesia, postoperative

- Effects of ketorolac trometamol on renal function, Aitken, H. A., et al., 481-485
- Extraluminal clonidine infusions for analgesia after total hip replacement, Carabine, U. A., et al., 338-343
- Extraluminal clonidine for postoperative analgesia: audit of a nurse-administered service to 800 patients in a district general hospital, Stuart-Taylor, M. E., et al., 429-432

Analgesic techniques, extradural

- Continuous extradural analgesia: comparison of midwife top-ups, continuous infusions and patient controlled administration, Purdie, J., et al., 580-584
- Delayed presentation of an extradural abscess complicating thoracic extradural analgesia, Sowter, M. E., et al., 103-105
- Extraluminal clonidine infusions for analgesia after total hip replacement, Carabine, U. A., et al., 338-343
- Extraluminal clonidine for postoperative analgesia: audit of a nurse-administered service to 800 patients in a district general hospital, Stuart-Taylor, M. E., et al., 429-432
Blood, anaesthetic concentration

Analgesic techniques, neurolysis, Acute effect and recovery of primary fibres after graded radiofrequency lesions in anaesthetized rats, HAMANN, W., et al., (ARS) 433-434P

Analgesic techniques, subarachnoid, Analgesia for labour and delivery using incremental diamorphine and bupivacaine via a 32-gauge intrathecal catheter, KESTIN, I. G., et al., 244-247

- Mental function after TURP, EVANS, M. J., (C) 329
- Mental function after TURP, SMITH, C., (C) 329

Surgery, war injuries
- Transfusion requirements for the management of war injured: the experience of the International Committee of the Red Cross, ESJAYA-CHAUVIN, B., et al. 221-223

Sympathetic nervous system, adrenaline
- Attenuation of the cardiovascular responses to subcutaneous adrenaline in neurosurgical patients, MURALIDHAR, K., et al. 264-267
- Reversal of extradurally induced hypotension, DELLA POPA, A., (C) 229-230
- Reversal of extradurally induced hypotension, SHARROCK, N. E., (C) 230
- Stability of fentanyl, bupivacaine and adrenaline solutions for extradural infusion, DAWSON, P. J., et al. 414-417

Sympathetic nervous system, adrenergic block
- Attenuation of the cardiovascular responses to subcutaneous adrenaline in neurosurgical patients, MURALIDHAR, K., et al. 264-267

Sympathetic nervous system, block
- Effect of low and high concentrations of alfentanil administered intraveously in A6 and C fibre mediated somatosympathetic reflexes, WANG, C., et al. 503-507

Sympathetic nervous system, clonidine
- Dexmedetomidine—A powerful new adjunct to anaesthesia? PEDEN, C. J., et al. (E) 123-125
- Extradural clonidine infusions for analgesia after total hip replacement, CARABINE, U. A., et al. 338-343

Sympathetic nervous system, detomidine
- Use of a total i.v. anaesthetic technique using guaiphenesin, ketamine and detomidine in horses: endocrine changes and detomidine concentrations, TAYLOR, P. M., et al., (ARS) 444-445P

Sympathetic nervous system, dexmedetomidine
- Dexmedetomidine—A powerful new adjunct to anaesthesia? PEDEN, C. J., et al. (E) 123-125
- Dexmedetomidine attenuates sympathoadrenal responses to tracheal intubation and reduces the need for thiopentone and peroperative fentanyl, SCHENIN, B., et al. 129-131
- Dexmedetomidine reduces intraocular pressure, intubation responses and anaesthetic requirements in patients undergoing ophthalmic surgery, JAAKOLA, M.-L., et al. 570-575

Sympathetic nervous system, ephedrine
- Cardiovascular support during combined extradural and general anaesthesia, WRIGHT, P. M. C., et al. 585-589
- Reversal of extradurally induced hypotension, SHARROCK, N. E., (C) 230

Sympathetic nervous system, esmolol, Esmolol
- Hydrochloride for management of the cardiovascular stress responses to laryngoscopy and tracheal intubation, VUCICIV, M., et al. 529-530

Sympathetic nervous system, methoxamine
- Cardiovascular support during combined extradural and general anaesthesia, WRIGHT, P. M. C., et al. 585-589
- Methoxamine and peripheral blood flow during subarachnoid anaesthesia, FOGARTY, D. J., et al., (ARS) 441P

Sympathetic nervous system, metoprolol
- Attenuation of the cardiovascular responses to subcutaneous adrenaline in neurosurgical patients, MURALIDHAR, K., et al. 264-267

Sympathetic nervous system, procaine
- Attenuation of the cardiovascular responses to subcutaneous adrenaline in neurosurgical patients, MURALIDHAR, K., et al. 264-267

Sympathetic nervous system, sympathetic responses
- Cardiovascular and plasma catecholamine responses at tracheal extubation, LOWBIE, A., et al. 261-263
- Dexmedetomidine attenuates sympathetic responses to tracheal intubation and reduces the need for thiopentone and peroperative fentanyl, SCHENIN, B., et al. 126-131
- Dexmedetomidine reduces intraocular pressure, intubation responses and anaesthetic requirements in patients undergoing ophthalmic surgery, JAAKOLA, M.-L., et al. 570-575

Temperature, body
- Reflective blankets used for reduction of heat loss during regional anaesthesia, HINDSHOLM, K. B., et al. 531-533

Temperature, effect
- Effect of cardiacpulmonary bypass on plasma cholinesterase, SHARER, E. S., et al., (ARS) 441-442P

The Principles and Practice of Pharmacology for Anaesthetists, 2nd Edn, CALVEY, T. N., et al., (R) 638

Age-dependent variation in response to tubocurarine in

Comparison of the train-of-four fade profiles produced
during anaesthesia by vecuronium and atracurium.

Prediction of the spread of repeated spinal anaesthesia
with bupivacaine.

Minimum alveolar concentration of sevoflurane in
children.

Oxygen desaturation after dental anaesthesia.

Hyponaemia is reduced by pulse oximetry monitoring in
the operating theatre and in the recovery room.

Fluid absorption during laser ablation of the endo-
termium in the treatment of menorrhagia

The role of histamine in the cardiovascular effects of
stracurium.

Age-dependent variation in response to tubocurarine in
the isolated rat diaphragm.

Topical anaesthesia of the nasal mucosa for fibroptic
airway endoscopy.

Indocyanine green clearance and hepatic function during
and after prolonged anaesthesia: comparison of halo-
thane with isoflurane.

Effects of halothane and other volatile anaesthetics on
protein synthesis and secretion in guinea pig liver
slices.

Pharmacokinetics of propofol and haemodynamic chan-
ges during induction of anaesthesia in uraemic patients.

Extrahepatic metabolism of propofol in man during the
anhepatic phase of orthotopic liver transplantation.

Oxygen modulates contractile responses to potassium
and prostaglandin F2α in human pial arteries.

Direct vasoconstrictor and vasodilator effects of propofol
in isolated dog arteries.

Diabetes and anaesthesia: the past decade.

Comparison of the train-of-four fade profiles produced
by vecuronium and atracurium.

Does postoperative pyrexia indicate malignant hyper-
thermia susceptibility?

Ventilatory effects of laparoscopy under general anaes-
thesia.

Seizure-like movements during induction of anaesthesia
with sevoflurane.

Infection control in intensive care units: U.K. national
survey.

Transfusion requirements for the management of war
injured: the experience of the International Com-
mittee of the Red Cross.

Radioimmunoassay tests in anaphylaxis.

Wearing of face masks for spinal anaesthesia.

Potassium in the perioperative period.

No heparinization with the Cell Saver.

The ideal spinal needle.

Fibreoptic intubation.

Apology.

Does propofol in combination with alfentanil provide
stable anaesthesia in cardiac patients?

Potassium in the perioperative period.

Reversal of extradurally induced hypotension.

Propofol in acute intermittent porphyria.

Radioimmunoassay tests in anaphylaxis.

Wearing of face masks for spinal anaesthesia.

Potassium in the perioperative period.

No heparinization with the Cell Saver.

The ideal spinal needle.

Fibreoptic intubation.

Apology.

Does propofol in combination with alfentanil provide
stable anaesthesia in cardiac patients?

Potassium in the perioperative period.

Reversal of extradurally induced hypotension.

Propofol in acute intermittent porphyria.

Does postoperative pyrexia indicate malignant hyper-
thermia susceptibility?

Ventilatory effects of laparoscopy under general anaes-
thesia.

The single choice in multigas monitoring.

Datex Capnomac Ultima™.

More than 3000 anaesthetists around the world have specified the Capnomac Ultima as their ultimate choice of multigas monitor. Why?

Because Capnomac Ultima is a family of monitors offering 8 parameter configurations to cover just about any needs. All of them monitor CO₂, Patient O₂, anaesthetic agents and N₂O. Breath by breath, at the patient’s airway.

Because Capnomac Ultima is the only machine capable of monitoring airway pressures, volumes and compliance at the best possible location - at the intubation tube.

Because Capnomac Ultima is the only machine capable of monitoring airway pressures, volumes and compliance at the best possible location - at the intubation tube.

Because the Capnomac Ultima family also contains models for identifying anaesthetic agent and for measuring Sevoflurane and Desflurane.

Because Capnomac Ultima is ideally suited to all patients and anaesthesia systems.

Because by adding pulse oximetry, Capnomac Ultima will give you a complete picture of the patient’s oxygenation, ventilation and gas exchange.

Small wonder that more Datex Capnomac Ultima monitors were sold worldwide during 1991 than any other make. But don’t take our word for it!

The top-of-the-range Datex Capnomac Ultima multigas monitor even allows you to see compliance as a loop and as a numerical value, giving you invaluable help in finding and adjusting your optimal ventilator settings for each patient.

Datex safe anaesthesia care
